## Dr Judy Todd

MB CHB, FRCA

### *In her own words....*

"I graduated from the University of Glasgow Faculty of Medicine in 1995. As well as training in anaesthetics and becoming a Fellow of the Royal College of Anaesthetists in 2001, I also started a career in aesthetic medicine in 2005. When it comes to aesthetic treatments, it is my view that less is more and as such, I work with the patient to treat their concerns while striving at all times for a natural looking result that does them justice.

The non-surgical aesthetic industry has grown massively over the past decade in what it can offer non-surgically and as such, I have followed these developments and trained to include some of the most effective non-surgical treatments available in my aesthetic practice. I get the best results for my patients by combining innovative face and neck lifting and skin resurfacing treatments with traditional injectable rejuvenation and skin treatments. As well as my busy aesthetic practice, I work the other part of the week as a Consultant Anaesthetist in the NHS. I love this role too and I am an avid supporter of the NHS. In this role I manage critically ill patients and emergencies on a day to day basis so I am highly skilled and experienced to be able to deal with any potential adverse events that could occur in an aesthetic practice, albeit unlikely.

Finally, I apply the same standards, quality control and ethics as that of my NHS hospital practice to my aesthetic medicine practice with safety being paramount at all times."
